This diagram illustrates the optional equipment for the machine, showing various components and their assembly points. The components are labeled with numbers:

- 1**: A small bracket or clip.
- 2**: A screw.
- 3**: The main body of the machine.
- 4**: A handle or lever.
- 13**: A circular component, possibly a cap or cover.
- 31**: A large, rectangular component, possibly a battery or power source.
- 32**: A cap or cover for the battery.
- 33**: A small screw or bolt.
- 37**: A cable or wire.
- 39**: A small circular component, possibly a cap or cover.
- 40**: A small circular component, possibly a cap or cover.
- 44**: A small screw or bolt.
- 45**: A small screw or bolt.
- 46**: A small screw or bolt.
- 72**: A small screw or bolt.
- 78**: A small screw or bolt.
- 81**: A small screw or bolt.
- 109**: A small component, possibly a switch or button.
- 111**: A small component, possibly a switch or button.
- 114**: A small component, possibly a switch or button.
- 122**: A small component, possibly a switch or button.
- 137**: A large, rectangular component, possibly a battery or power source.
- 23**: A small component, possibly a switch or button.

The diagram shows the assembly of these components onto the main body of the machine. A dashed line indicates the path of a cable or wire. A box labeled "OPTIONAL EQUIPMENT" is shown at the bottom left.

Briggs & Stratton 1-800-233-3723

Engine Power Rating Information

The gross power rating for individual gas engine models is labeled in accordance with SAE (Society of Automotive Engineers) code J1940 (Small Engine Power & Torque Rating Procedure), and rating performance has been obtained and corrected in accordance with SAE J1995 (Revision 2002-05). Torque values are derived at 3060 RPM; horsepower values are derived at 3600 RPM. Actual gross engine power will be lower and is affected by, among other things, ambient operating conditions and engine-to-engine variability. Given both the wide array of products on which engines are placed and the variety of environmental issues applicable to operating the equipment, the gas engine will not develop the rated gross power when used in a given piece of power equipment (actual "on-site" or net power). This difference is due to a variety of factors including, but not limited to, accessories (air cleaner, exhaust, charging, cooling, carburetor, fuel pump, etc.), application limitations, ambient operating conditions (temperature, humidity, altitude), and engine-to-engine variability. Due to manufacturing and capacity limitations, Briggs & Stratton may substitute an engine of higher rated power for this Series engine.
